

Westchester County Water Profile

Test - Instructions

Requirements before we arrive:

1. If you have water treatment equipment in the home you need to have a working by-pass valve in place and you need to by-pass the water equipment before we arrive. The water test is done on **Raw** water used for drinking, not treated water. This means you can't use an outside hose bib or slop sink.
2. Any sediment filters that can't be by-passed needs to be removed from the canister, the canister cleaned and put back empty, prior to us coming.
3. One faucet in the home has to be unused for 6 hrs prior to us coming however, this has to be a faucet that is used on a normal basis like a kitchen or bathroom faucet. **Do not** let the water sit for longer than 6 hrs because this increases your chances of failing on a Lead test. Westfair is not responsible for any leaks from this faucet post water testing. This includes o-rings, aerators, washers etc.
4. The Section, Lot, Block # and Municipality of the home has to be provided to us prior to us coming to the home.
5. On the day of the test we need a signature from the person requesting the profile as well as a check payable to Westfair Water Systems or credit card.
6. You will have the results 12-14 days after the sample is taken.
