

# WATER LEAK DETECTION SYSTEM

## Homeowner Pre-Install Preparations

The Kinetico leak detection system requires both a Kinetico account and internet access during the installation process. This document describes what the homeowner will need to prepare for the installation.

\*\* Batteries need to be changed annually \*\*

### Items homeowners will need to have ready for the installer:

Homeowner will need to have a smart device (iOS or Android) with access to the internet.

Homeowner will need internet access in the home.

Download and install the "Kinetico Monitoring" app for use with the hub.

Create a Kinetico account:

- Open the Kinetico Monitoring app to create an account.
- Homeowner will use an email address as the Kinetico account name and will need access to this email to verify their Kinetico account.

Verify account by clicking the link in your received email.

Login to the Kinetico Monitoring App.

Wi-Fi Network Name and Password:

- During system installation, the Kinetico Hub 3.0 will be connected to the home Wi-Fi. The homeowner will need to know their Wi-Fi network name and password to program into the Hub 3.0 via the Kinetico Monitoring app during installation.

The Hub 3.0 should be placed in a central location in the home for communication with the Kinetico valve and sensors. It requires access to a power outlet and reliable access to the home Wi-Fi from its location.

Prior to installation, the homeowner should communicate the square footage of their home to Westfair as Kinetico range extenders may be required on larger homes to help maximize the Zigbee signal strength to the homes extremities.
